

This program is intended to be installed on computers located on a Local Area Network (LAN) only.

A portion of the program files will be installed on a single computer (the server or central computer) while remainder of files must be installed on each computer from which it is desired to run the program (the workstation or local computer).

A site license must be purchased for the total number of workstations the program is to be installed upon.

If you need additional workstation licenses, please direct an email request to orders@bradleysoftware.com

After workstation installation, the program can be moved to a different workstation if desired, but if the maximum installations permitted by the site license has been reached, the program must first be removed (un-installed) from a workstation on which it has already been installed.

If you have problems installing or using this application, [CLICK HERE](#) for technical support.

TABLE OF CONTENTS:

1.0 Installation

2.0 Removal

3.0 Re-Registration

1.0 Installation:

Installation of this program is accomplished in 2 steps. The first step is installation of the program in a shared directory on the network. The second step is installing the local program files onto each workstation, which should have access to the program.

STEP A - SERVER INSTALLATION - to be performed by a network administrator.

A.1) Create a shared directory on the server.

A.2) On the CD locate the directory named SERVER. In that directory there are files, copy all of the files to the shared network directory.

A.3) You may want to write protect the shared directory to ensure that the program is not inadvertently deleted by a user.

STEP B - CLIENT INSTALLATION

B.1) To complete the installation of the program, insert CD into a CD drive accessible from the workstation. B.2) Click the START button on the Windows taskbar of the workstation.

B.3) Click RUN.

B.4) A window appears. In that window, type D:\SETUP (where "D" is the drive letter assigned to the CD drive selected in step B.1).

B.5) Click OK.

B.6) Follow the instructions that appear on your screen.

B.7) The program will ask for the location of the PROGRAM file (AM202X.EXE - "X" for current year) on the network. Enter the path to the shared directory created in step A.1. If necessary, locate it by clicking the BROWSE button. The location can be a mapped drive or a network path. The program file MUST be located in this directory for the installation to proceed.

B.8) Next the program will ask for the location for the local program files.

Special Notes:

? Ensure that the location selected is unique for the workstation you are setting up. THE LOCATION CANNOT BE A DIRECTORY THAT IS SHARED BY OTHER WORKSTATIONS. DO NOT ATTEMPT TO INSTALL THE

LOCAL FILES OF MORE THAN ONE WORKSTATION IN A DIRECTORY.

? If the location is a network directory (as opposed to a local directory on the workstation) you must have write privileges to the location.

? On some corporate networks where PC hard drives have been replicated for ease of installation and the primary C:\

partition is duplicated on all machines on the network, the SUPPORT file path in the program PREFERENCES must ALWAYS be unique for each client on the network.

B.9) Complete the installation by following the instructions that appear on the workstation screen.

Select to enter your registration code. When the program asks if you purchased via the internet click YES. You will be supplied an order number and keycode for licensing.

B.10) Repeat steps B.1 through B.9 at each workstation.

2.0 Removal

Removing the program is a 1-step process.

a) Click the START button on the Windows taskbar.

b) Click SETTINGS

c) Click the CONTROL PANEL icon

d) Double click the ADD/REMOVE PROGRAMS icon

e) A window listing the programs installed on your computer will appear. Click on "202X ARREARSMaster CALCULATOR." Click on the ADD/REMOVE button. Follow the prompts to complete the removal of the program files from the machine.

f) When the removal process has been completed, the program may be installed on another computer.

g) Removing the program does not delete the data files (.AM8 files) you may have created, which are located in the data files directory (normally C:\PROGRAM FILES\BRADLEY\SUPPORT). You may copy or move the data files to the computer on which you re-install the program or access them over a network in their original location, as desired.

3.0 Re-Registration

If you receive a message that states that you are not running a valid version of the program, [CLICK HERE](#) for technical support.
